The new Royal Adelaide Hospital design has been guided by stringent environmental standards. The design of the Hospital and the choice of fixtures and fittings will ensure water and energy are used as efficiently as possible and will ensure that less consumables are used in the operations of the hospital and more waste is recycled.

The Royal Adelaide Hospital will be the largest hospital in South Australia, incorporating 800 beds, an ambulatory care centre, operating theatre suite, all clinical and non-clinical support services necessary for the provision of high quality and safe patient care, and an excellent facility for teaching and research.

The new hospital will have flexible spaces that can be adapted as medical technology and patient needs change. There is also room to accommodate a growing population with space left for further expansion on the western side of the site.
